Slipr in four pages

One show, two experiences.

Audience mode presents; reader mode explains.

1. A show is data

show.json holds the slides and the reader layer.

Images and documents sit next to it in the show folder.

2. Templates own the looks

Layouts are HTML fragments with named slots.

Swap the template and the whole show restyles.

3. Rich embeds

Diagrams, web pages and PDFs like this one.

PDF text is searchable in reader mode.
